AMENDMENTS TO THE SPECIFICATION

Please replace the abstract with the following:

A system which facilitates electronic shopping, which includes a graphical image component residing on a user interface; and a shopping basket component associated with the graphical image component. The shopping basket component provides drag and drop capabilities such that a user can drag and drop representations of identified items from a plurality of sources using a computer pointer into the graphical image and descriptions of the items will be retained by the shopping basket component. The system allows for a user to concurrently effect multiple transactions with disparate items respectively associated a plurality of sources.
